Dear Parents,

Warm greetings from Dalmia Vidya Mandir!

We trust this letter finds you and your family in good health. As the summer break nears, we're delighted to share that our dedicated team, under the guidance of the Principal and Dr. Rosetta Williams (CEO, DVM group of schools), has curated summer assignments for your child.

These assignments, covering all subjects, aim to keep your child engaged in learning and prepare them for the upcoming academic year. They offer opportunities for exploration, skill development, and maintaining a learning routine during the break.

Your support in ensuring your child completes and submits these assignments to the respective class teacher on the first day of school reopening after the break is greatly appreciated. It will contribute to a positive start to the academic year and reinforce the knowledge acquired during the break.

For any queries or concerns, please reach out to the class teachers. Thank you for your ongoing support and involvement in your child's education. We eagerly anticipate a productive and successful academic year ahead.

Educationally yours,

Principal & Team

Passage-1

1. Hand washing is as essential as eating food. It is the best way to be healthy and to stay away from various diseases. Soap plays an important role in removing dust, microbes and lubrication, maintaining good health every day. In comparison to the hand sanitizer, soap and water are more efficacious in removing certain microbes, pesticides and other chemical residues that dawdle on hands.
2. Hand sanitizers are more effective in hospitals when hands are in contact with germs, but not soiled or greasy. Other studies also reveal that hand sanitizers might be effective on lubricated hands with certain microbes. When hands are heavily soiled or greasy, for example, after playing outdoor games, gardening, fishing, travelling, executing extension activities such as campaigning and in certain cases, hand sanitizers may not be effective. In such circumstances, washing hands with soap and water is always preferable. Sanitizers cannot remove soil, dirt and grease rather they will make hands sticky, attracting more dirt.
3. According to the Center for Disease Control (CDC), hand hygiene encompasses the cleansing of hands by using soap and water, antiseptic hand washes, antiseptic hand rubs such as Alcohol-Based Hand Sanitizers (ABHS), foams or gels, or surgical hand antiseptics. Hand sanitizers as a disinfectant are in more use today because of its ease of availability, lack of water and time and their proven efficacy in lowering microbial load.
4. A review of research works states that limited literature is available in relation to hand sanitizers and washing hands. As COVID-19 has rapidly spread worldwide, panic buying of sanitizers over the coronavirus pandemic has led to stocking up of sanitizer sprays, gels, and so on, without knowing the effect of the sanitizer.
5. According to the World Health Organisation (WHO), an alcohol-based hand sanitizer is “an alcohol-containing preparation (liquid, gel, or foam) designed for application to the hands to inactivate microorganisms and/or temporarily suppress their growth. Such preparations may contain one or more types of alcohol, other active ingredients with excipients, and humectants.” In 1966, hand sanitizers came into existence in healthcare facilities and were popularised significantly in early 1990s.
6. Hand sanitizers can be classified as alcohol-based or alcohol-free. Alcohol-based sanitizers comprise between 60 and 95 percent alcohol in the form of ethanol, isopropanol, or n-propanol. Alcohol has tendency to disseminate proteins and counteract certain micro-organisms at this concentration. Alcohol-free products have a property of disinfectants, such as Benzalkonium Chloride (BAC) or on antimicrobial agents, such as triclosan, which is immediate and purposeful. Several sanitizers comprise emollients (e.g.) glycerine that pacify the skin, thickening agents and provide aroma.
